

DATASHEET · CREATE · PDF STUDIO

Cutting pages, gluing them, scanning again?

Now the right PDF takes a single step.

PDF Studio converts Word, Excel, PowerPoint, images, emails, e-books and web pages to PDF, and PDFs back to Word, Excel or PowerPoint. It also merges, splits, rotates and compresses, creates PDF/A and adds password protection. In the app, via REST API and via MCP.

AT A GLANCE

22 tools, from Office import to password protection. Upload a file, pick a tool, download the result.

01 · WHAT IT IS ABOUT

Every format needs its own program. PDF Studio is one for all of them.

A quote arrives as a Word file, receipts as photos, an order as an email. The file needs everything as one PDF, the archive needs PDF/A, and sending needs it small and protected. PDF Studio handles each of these steps with one tool, no desktop software required.

INPUT

PDF, Word, Excel, PowerPoint, OpenDocument, RTF, TXT, CSV, email, images, e-books, URL

OUTPUT

PDF, PDF/A, DOCX, XLSX, PPTX, JPG or WebP as a download

ACCESS

In the app, via REST API and as MCP tools po_pdfstudio_*

FILES

Up to 100 MB per file, up to 40 PDFs to merge

**Office and more to PDF**

Word, Excel, PowerPoint, OpenDocument, RTF, TXT and CSV become PDF, and so do emails in EML or MSG format.

PDF back to Office

PDF → Word, PDF → Excel and PDF → PowerPoint return editable DOCX, XLSX and PPTX files.

Arrange pages

Merge PDFs in list order, split into single pages or page ranges, and rotate pages by 90, 180 or 270 degrees.

PDF/A and compression

PDF/A-1b, -2b or -3b for the archive. Compression in four levels, from lossless to small for sending.

Protect and unlock

Set a password of at least eight characters, remove a known password, and lift print, copy or edit restrictions.

Images, e-books, web pages

JPG, PNG and TIFF as one PDF, e-books (EPUB, MOBI, AZW3, FB2, DjVu) to PDF, a web page by URL as PDF. PDF pages as JPG or WebP.

02 · HOW IT WORKS

Upload, pick a tool. Download the result.

PDF Studio shows the tools that fit the uploaded file. Via REST API, each operation runs as its own job with the same options.

1

Upload a file or enter a URL

Drag a file into the field or choose one. For a web page, enter the address and click **Use website**.

2

Pick a tool

Under **Tools**, pick the right tool, such as **Merge**, **Split** or **Password protection**, and set the options.

3

Start

Start with **Start conversion** or the tool's own button. The app shows the progress until the result is ready.

4

Download

Save with **Download file**. If several files are created, for example when splitting, each one is offered as its own download.

TECHNICAL DATA

FEATURE	DETAILS
App input formats	PDF, DOC/DOCX, XLS/XLSX, PPT/PPTX, ODT/ODS/ODP, RTF, TXT, CSV, EML/MSG, JPG/PNG/TIFF, EPUB/MOBI/AZW3/FB2/DjVu
PDF/A	PDF/A-1b, PDF/A-2b (default), PDF/A-3b
Compression	low, medium (default), high, lossless
PDF to image	JPG or WebP at 72, 150, 300 or 600 dpi
Web page to PDF	A4, A3, A5, Letter or Legal, portrait or landscape, selectable screen width and margins
REST API	POST /job/add/pdfstudio_____, e.g. pdfstudio___merge_pdf; input as file, pofid or URL
MCP tools	po_pdfstudio_merge, _split, _compress, _rotate, _convert_to_pdfa, _convert_to_word and more

03 · IN PRACTICE

For files, archive and sending. The right PDF every time.

A proposal pack in one file

Cover letter from Word, price list from Excel and a data sheet as PDF: each file becomes a PDF, then **Merge** joins everything into one pack in the order you want.

Documents for the archive

Final contracts and invoices go into the archive as PDF/A-2b. Large scans are compressed first, so they are easy to store and send.

Keep working with a PDF table

A price list only exists as a PDF. PDF → Excel turns it into an XLSX file in which the team keeps working with the numbers.

FREQUENTLY ASKED QUESTIONS

Which files can I upload?

PDF, Word, Excel, PowerPoint, OpenDocument, RTF, TXT, CSV, emails (EML, MSG), images (JPG, PNG, TIFF) and e-books, plus a web page by URL. Each file can be up to 100 MB.

How do I protect a PDF?

With **Password protection**, you set a password of at least eight characters. Without it, the file stays locked. **Remove restrictions** lifts print, copy and edit restrictions.

Can I process several files at once?

Yes. **Merge** takes up to 40 PDFs at once, and **Images** → PDF turns several images into one PDF.

Can I use PDF Studio from my own applications?

Yes. Each operation is its own job, for example POST `/job/add/pdfstudio__merge_pdf`, also with the `pofid` of a stored document. In Claude and Cursor, the tools are available as MCP tools `po_pdfstudio_*`.
