

DATASHEET · CREATE · AI TRANSLATION

Product names mangled in every translation?

Your terms stay your terms.

AI Translation turns text, Excel spreadsheets and JSON files into 35 languages and keeps brands, product names and technical terms in the original. Built for sales, support, marketing and development teams, in the app and via API.

AT A GLANCE

35 languages, three quality tiers, a glossary of protected terms, plus tone and domain per request. The studio fills Excel spreadsheets in several target languages at once.

01 · WHAT IT IS ABOUT

A new language, your own terms. Now the two finally fit.

A quote has to go out in English, French and Polish today. Without instructions, any language model translates your product names too. In AI Translation you add such terms to the **Glossary** once, and they stay put in every language.

INPUT

Free text, text files, Excel and CSV spreadsheets, JSON

LANGUAGES

35 languages, source language detected automatically, variants such as German (Switzerland)

OUTPUT

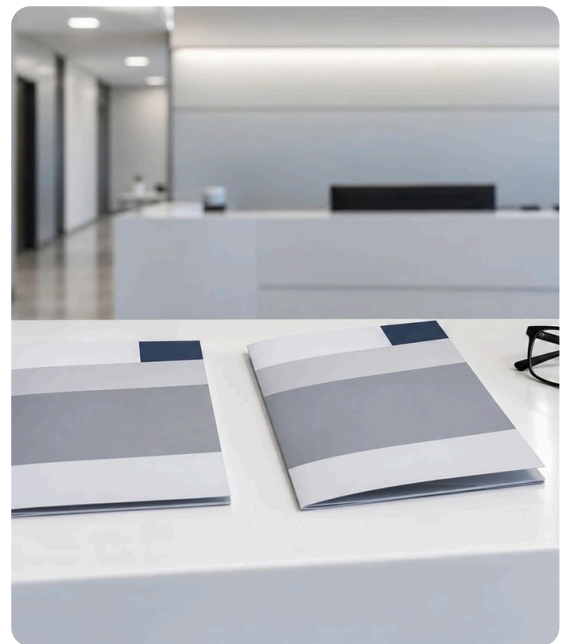

Translation ready to copy, spreadsheets as Excel or CSV, JSON with the same structure

ACCESS

App under

Media AI › Translate Studio

, REST API and MCP

Protected terms

Brands, product names and proper names stay in the original. The studio suggests detected names in the **Glossary**, and you add your own entries.

Three quality tiers

Basic for short standard texts, Premium for business correspondence, Ultra for specialist texts such as contracts, medicine and engineering.

Tone and domain

Tone neutral, formal or friendly; domain General, Legal, Medical or Marketing. You choose both per request.

Excel into several languages

Row 1 holds the language codes, and the studio fills every selected target column. Optionally, **Translate only empty target cells**.

JSON with its structure

Values are translated while keys and layout stay intact. A good fit for app strings, product data and exports.

Rewrite in the same language

Rewrite mode improves spelling, grammar and clarity without changing the language.

02 · HOW IT WORKS

Paste text, pick a language. Get the translation back.

In the studio it takes four steps. The REST API and MCP offer the same languages, tiers and protected terms.

1

Open the studio, pick a mode

Under **Media AI** > **Translate Studio**, choose Text, Excel or JSON. Paste your text or drag a text file into the field.

2

Set languages and tier

Source language automatic or fixed, plus target language and regional variant. Under **Quality**, choose Basic, Premium or Ultra.

3

Protect your terms

From the Premium tier, the **Glossary** shows detected names. Add your own entries with one term per line.

4

Execute and use the result

Execute starts the request. Copy the result, or export spreadsheets as Excel or CSV.

TECHNICAL DATA

FEATURE	DETAILS
Languages	35 languages as source and target, source language automatic or fixed
Regional variants	26 variants, e.g. de-CH, en-US, es-419, pt-BR, zh-Hant
Input in the app	Free text up to 15,000 characters, text files up to 512 KB, .xlsx, .xls, .csv, .tsv, JSON
Options	Tier Basic, Premium, Ultra; tone; domain; Translate or Rewrite mode
Protected terms	up to 150 per call, up to 100 characters per term
REST API	GET /translate/languages, POST /translate/text (text, list or JSON object)
MCP	po_translate_text and po_translate_get_languages on /mcp-full

03 · IN PRACTICE

Quotes, catalogs, app strings. Always in your own terms.

A quote for a customer in London

Sales pastes the quote and picks English (UK), formal tone and the Premium tier. Product names and "Hall 3" are in the glossary and stay unchanged.

Product copy in five languages

Marketing keeps a spreadsheet with the columns de, en, fr, es and pl. The batch fills the empty cells, and the Excel export goes back into the shop system.

App strings as JSON via API

Development sends a JSON file to /translate/text with the brand list as preserve_terms. The keys stay in place, and the values come back translated.

FREQUENTLY ASKED QUESTIONS

How many languages can I choose from?

35 languages, each as source and target, from German, English and French to Arabic, Chinese, Japanese and Korean. GET /translate/languages returns the list with codes.

How long can a text be?

Up to 15,000 characters per request. For larger volumes, translate a spreadsheet in Excel mode, which fills every selected target column in one batch.

Do product names and brands stay intact?

Yes. Terms in the glossary stay in the original. Via API you pass them as preserve_terms, up to 150 per call.

How is it billed?

By usage, depending on the quality tier. Current prices are on the pricing page.

GET STARTED

Translate your first text with your own glossary.

Sign in to your PaperOffice account and open [Media AI › Translate Studio](#). Paste a text, add your terms to the [Glossary](#), click [Execute](#).
