

[OVERVIEW](#) • [SOLUTIONS BY DOCUMENT TYPE](#)

No two documents ask the same of you.

An invoice needs amounts, an ID needs a check, a contract needs deadlines. PaperOffice knows the difference.

[NINE DOCUMENT TYPES](#)

Pick the document type and see which fields are read and which checks are run.

NINE DOCUMENT TYPES

From receipt to technical drawing.

Each page shows the fields, the checks and the building blocks behind that document type.

Invoices

Header data, line items and totals from PDF, scan and e-invoice.

paperoffice.ai/en/solutions/document/ai-invoice-processing-ocr-automation

Contracts

Parties, terms, notice periods and clauses within reach.

paperoffice.ai/en/solutions/document/ai-contract-analysis-ocr-automation

ID documents

Passport, national ID and driving licence read and checked.

paperoffice.ai/en/solutions/document/ai-id-verification-ocr-recognition

Forms

Filled fields, checkboxes and signatures captured.

paperoffice.ai/en/solutions/document/ai-form-recognition-ocr-automation

Handwriting

Handwritten notes and forms turned into text.

paperoffice.ai/en/solutions/document/ai-handwriting-recognition-ocr-digitization

Bank statements

Transaction rows, balances and counter accounts as structured data.

paperoffice.ai/en/solutions/document/ai-bank-statement-processing-ocr-automation

Medical records

Findings and prescriptions with sensitive details redacted.

paperoffice.ai/en/solutions/document/ai-medical-records-ocr-processing

Tax forms

Form fields recognised and deadlines kept on the file.

paperoffice.ai/en/solutions/document/ai-tax-form-processing-ocr-automation

Technical documents

Drawings, specifications and manuals made searchable.

QUESTIONS ABOUT DOCUMENT TYPES

What applies to every type.

Do I need a template per document type?

No. Extraction reads layout and context instead of fixed coordinates. You describe in plain words which fields you need, including your own document types.

What about mixed batches?

A batch of several documents is split at the content boundaries; each part gets its own type and record.

What happens with uncertain fields?

They go to human review. Every field carries a confidence value and its source location in the document, so checking is quick.

How does PaperOffice recognise the type?

Classification determines type, direction, language and sender in the same pass that reads the document. Folder, retention period and workflow follow from that.

Are tables read as well?

Yes, row by row with column mapping. Invoice line items or statement transactions come back as structured data.

And sensitive documents?

Personal details can be redacted permanently, and access rights apply per workspace and role.
